8:

Type (refer to synoptic categories): silt rich

Stratigraphic Matrix

Your interpretation: Internal External Structural Other (specify)

Your discussion: Sandy silt deposit with crushed lime stone occupies the east-north end of space 11640, directly to the south of the wall (33262) and surrounded by the round clay skin/possible vat emplacement (34569). There are 3 lime stone big fragments located beside each other to the east end of the ash rich deposit (34575), which suggests that they are a remnant of hearth platform similar to what had been discovered in 1991 bakeries.

Placement in square:

Volume of feature: Not excavated during 2014 season

Feature same as:	See features:	Structure no.:	Sondage no.: 183	Initials and date REM, HRK, 06-10-04
