Summary _____

Opened: We decided to clear the material surrounding Pit 9251.

Limits (N) W9211

(S) Probe, Pit 9251

(E) W9275

(W) Probe, Pit 9251

Closed: Came down on a floor. Changed to L18283.

Matrix: Medium brown soil with mudbrick inclusions.

Relations: Above: The eroded Northern section of the western face of W9275 covers L18259. W9275 would have sealed L18259 but L18259 is likely * contaminated by erosion.

North: L18259 reaches W9211.

South: L18259 was cut by a probe to find the face of W9275

East: L18259 was probably cut by W9275. W9275 on its west face floats after two courses of **

West: L18259 was cut by a probe to find the face of W9211.

Below: L18259 covers L18283 but does not seal it.

L18259 is cut by pit 9251 to the South West.

L18259 shares all the above relations and is equivalent to L18256.

* contaminated by erosion.

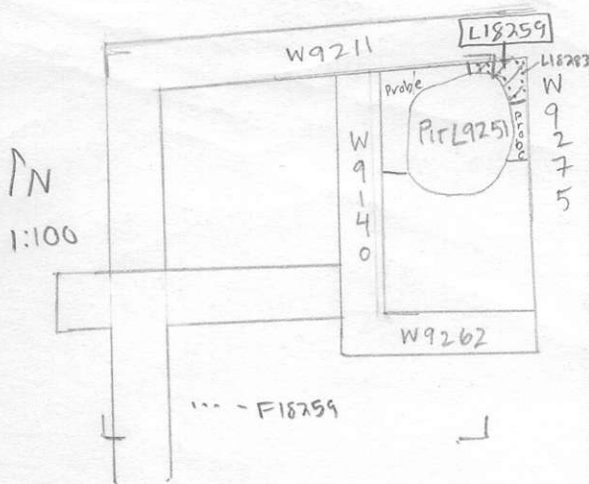

No photos were taken of floors in this locus, or below, because of its small area

** Field stones. Its east face continues down 3 more courses. L18259 is likely cut by this eastern stone course of W9275 (= phase e?).

Additional Observations/Value: Low Value.

Locus
L 18259
