Unit	Phase 9	Stage	Stratum	PoM
------	---------	-------	---------	-----

Summary

Opened: while excavating L18241, we realized that in one section, we had gone below the edge of the preserved F18241 to another floor. We then retroactively changed the loc to L18307 *

- Limits (N) F18249
 (S) Balk under F18241
 (E) Balk under F18241
 (W) Balk

Closed: Came down on floor. End of season reached.

Matrix: Loose brown sandy soil with few inclusions

Relations: Above: L18241 covers but does not seal L18307.
 North: L18307 continues under the downward slope of F18241.
 South and East: L18307 continues under L18241.
 West: L18307 continues into the balk.
 Below: L18307 comes down on F18307. F18307 is probably an earlier resurfacing of F18241 = F18249 which was only exposed because F18249 = F18241 was not well protected in that area.

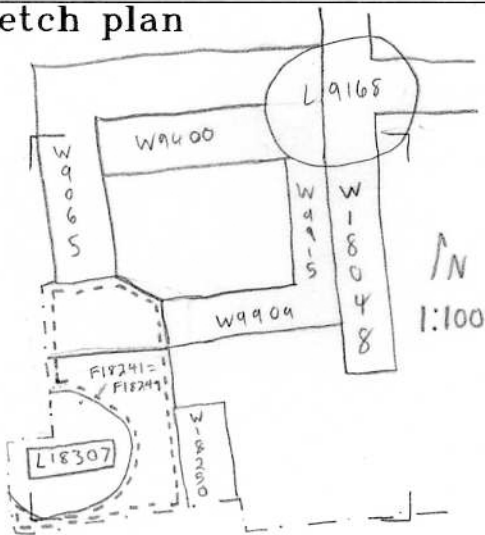

* From the edge of F18239 below

Additional Observations/Value: Medium Value.

Locus

L 1,8,3,0,7
