Unit	Phase	Stage	Stratum	PoM
------	-------	-------	---------	-----

Summary

Opened: Technical: Beginning of Season (2000) at Area G

- Limits (N) bank below W9735
- (S) bank below W9989
- (E) blk AH/AH-33?
- (W) L 18204

Closed: When floor was observed

Matrix: grey-brown soil, soft, with big body-sherds

Relations: L 18554 is sealed by F 18278.  
it is adjacent (the fill!) to W9735 at north and W9989 at South

Floor 18554 is a very ~~fragile~~ thin plaster floor that slopes a little westwards.

Note: F 18554 goes under W9735 (mb wall) at North and W18040. It might (not <sup>acertain</sup> positive observation) be going under W9989 (MB wall) at south.

the conclusion, therefore is that F 18554 belongs to an earlier phase of this part (the outer part or "court yard") of the Iron Age building of Area G.

When F 18554 was removed Locus was closed  
Additional Observations/Value: Important: Sealed Fill between floors and between architectural phases (!) in the "Court yard" of the IA building

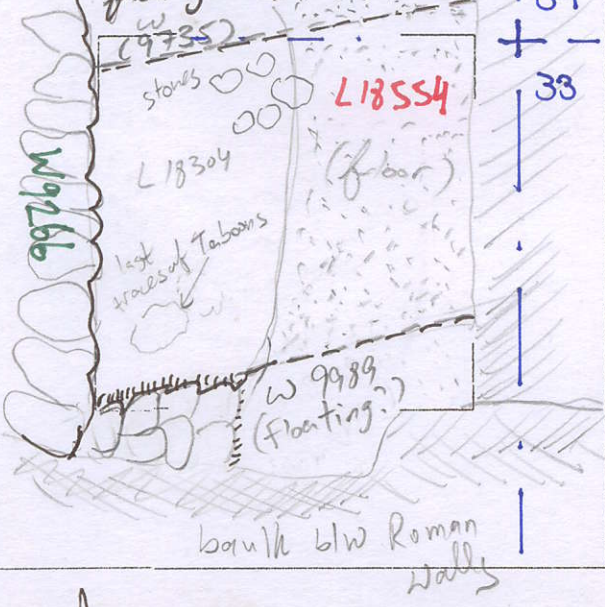

LOCUS  
L 18554
