Unit	Phase	Stage	Stratum	PoM	
Summary					
Opened: when F18555 has been removed					
Limits (N) blk. below W9560					
(S) blk. below W9278					
(E) bank (Eastern limit of Area G)					
(W) W18045					
Closed: when floor was observed					
Matrix: brown grey soil					
Relations: L 18556 is adjacent to W18045 at west.					
while digging here we observed matrix changes in the Locus: the southern side tended to be softer, greyer (more ashy spots and coal) than the northern part. ^{a little}					
At the southern side of L 18556, F18556 was uncovered					
I am not sure that we saw F18556 reaching W18045 but that is actually its only option.					
F18556 is a plaster floor with a grey circular "hole" in it (see sketch), which might have been a pit.					
Additional Observations/Value: L18556 is fill to floor in the courtyard of the IA building
