Unit	Phase	Stage	Stratum	PoM
Summary				
Opened: When F 18552 was removed				
Limits (N) W 9825				
(S) W 9729 b.				
(E) W 9266				
(W) W 9689				
Closed: When F 18563 was uncovered				
Matrix: Soft Grey soil, (similar to L 18552 above)				
Relations: L 18563 is fill adjacent to 4 walls of the Eastern Room of the IA building.				
about 8 cms. below F 18552, L 18563 came down to a plaster floor (this time much better preserved than F 18552) that looks like the upper one (F 18552): thin whitish-grey plaster, put (over laid) on a layer of crushed kurkar.				
F 18563 REACHES: W 9825 at North				
W 9266 at East				
No certain relations were observed between this floor and wall 9729b. to the South.				
to the west: the crushed kurkar sealed an orange coloured fill which might indicate of the big fire				
(if this is the situation - L 18563 is the first phase post that fire) when				
Additional Observations/Value: L 18563 is fill between floors in the eastern room of the IA building.
