summary:

Opened: removed surface L18911 (white-grey industrial layer) and came down on brown matrix below

Limits (N) baulk under ashlar

(S) baulk under W9400

(E) baulk under W9066/W9065

(W) L18907

Closed: not excavated

Matrix: a compact brown matrix, which appears in section to be the continuation of L18907 to the west.

Relations: This locus was not excavated. When Weizmann took a micromorphology core from L18911 the underlying matrix was included and so needed a locus number assigned. Except for the block cut in the southern end of the locus, the matrix was exposed but not excavated.

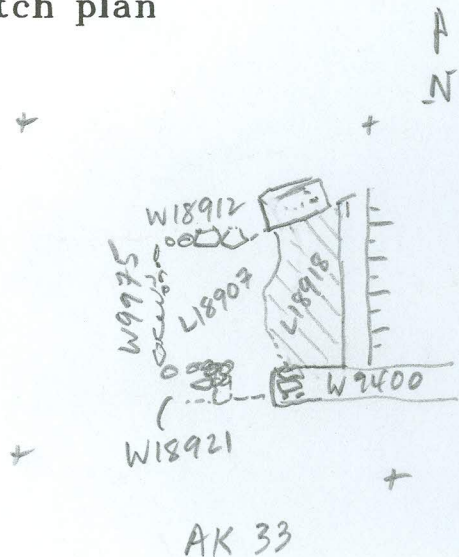

Importance: --
