Summary:

Description:

OPENING L9173 was opened when the soil below L9142 and L9141 became the same red clayey soil and these loci were collapsed to form L9173

DEF/LIM L9173 is fill coming down on floor 9154. L9173 is bounded by the west baulk. It is limited by W9065 and L9178 in the north. It is limited by L9139 to the SOUTH and L9166 below which is L9190 and L9154 to the east.

CLOSED Came down on FLOOR 9154

section

RELATIONS L9173 is cut by Persian pit L9139. It reaches W9065 L9173 reaches the soil of L9178 and is identical to it. L9173 reaches the soil of L9154 and is identical to it. L9173 reaches the soil of L9190. F9154 and soil of L9173 reach W9065

MATRIX AT opening many rocks were noted in the red clayey soil of L9173. The soil then becomes a homogeneous red clayey soil identical to L9154 This comes down on F9154, a dark grey ashy layer in the east which becomes a white ashy layer in the west. The white ash layer appears to continue below the dark grey ash layer in the section created by pit L9139 on the western side of L9190. F9154 slopes up from South to North under L9173 and
