**Summary**

**Opened:** Reached 1989 season elevations, and came down onto six distinctly different areas of material; opened [L9622], [L9623], [L9624], [L9625], [W9626], & [L9640]

**Limits (N)** Bordered by pit [L9622]

**(S)** Bounded by S bank of A132

**(E)** Bounded by E bank of A132

**(W)** Bordered by [L9624] and [L9539]

**Closed:** Came down onto floor [F9623] in [L9623], [L9624] & [L9625]

**Matrix:** Crumbly, grey soil, with little pottery and few bones.

**Relations:** [L9600] covers, but does not seal, [L9623]. To the N, pit [L9622] probably cuts [L9623]. To the S, [L9623] reaches the material in the S bank of A132. To the E, [L9623] reaches the material in the E bank of A132. To the W, [L9623] is probably cut by pit [L9539]. [L9623] probably reaches [L9624], since the mudbrick debris of [L9623] was deposited directly on top of the floor with no fill in between. For this reason, [L9623] may be later. Although material of [L9623], [L9624], & [L9625] is different for each locus, the <sup>same</sup> floor [F9623] underlies each one of them. [F9623] covers and seals [L9661].

In the N part of A131, there is a fragmentary floor, F9606/9603?, at about the same level as [F9623].

**Additional Observations/Value:** Because [L9623] lies below a "cleaning" locus, it may be disturbed.
