Summary \_\_\_\_\_

Opened: Opened to excavate mudbrick around W9684 contained in pit L9681, and below 9667

Limits (N) 19681  
 (S) AI33's mudbrick L9694  
 (E) W9684  
 (W) L9681

Closed: End of season - Not closed

Matrix: [L9683] is hard-packed mudbrick surrounding north and west W9684. It is distinct from L9681's loose, sherd-filled pit soil which surrounds it as mudbrick is hard-packed and near sherdless. [L9683] continues into AI33 as L9694 reaching W9684. Pure mudbrick in [L9683] is similar to fallen rubble with little mudbrick above in L9667.

Relations: [L9683] is mudbrick cut by pit L9681 at the north and west. To the east, [L9683] reaches Iron Age W9684. [L9683] continues south into AI33 where it is L9694. There is a clump of mudbrick material reaching W9684 at the east which may be part of [L9683] and it reaches L9701. L9701 contains pit-like material, similar to L9681, <sup>if L9701 is a pit or part of pit L9681</sup> [L9683], a fine mudbrick lens, is not the same matrix as L9667, a fallen rubble lens, above it. [L9683] continues into AI33 as L9694, only a small portion of this large mudbrick debris area extends into AI34 as L9683. It was closed, not because it was removed, but because it is the end of the '91 season. Possibly further excavation of pit L9681 and the continuation of [L9683] will reveal more clearly its relations to loci below.

Additional Observations/Value: No value, except possibly further excavations may reveal lower relations. L9694 covers much area in AI33 extending south into AI32
