Summary				

Opened: Came down on [F9690]; opened [L9712] as floor makeup & fill below

Limits (N) Bounded by N bank of AI32

(S) Bordered by [W9626]

(E) Bounded by E bank of AI32

(W) Bordered by [W9728] and [L9713]

Closed: Came down on [F9712]; end of season

Matrix: Floor makeup of [F9690] consists of hard, white plaster material, patchy in parts; fill below consists of hard, gray rubble and mudbrick debris, and traces of plaster, probably from the collapse of an adjacent mudbrick wall.

Relations: [L9640], [L9690], and [F9690] cover and seal [L9712] and [F9712]. [L9712] and [F9712] seal the as-of-yet unassigned locus below (end of season). To the N, the fill and floor of [L9712] reach the material at the N bank of AI32. To the S, the fill of [L9712] reaches [W9626]; [F9712] seems to reach [W9704]; [W9626] floats above [F9712]. To the E, fill and floor [L9712] reach the material in the E bank of AI32. To the W, the fill of [L9712] reaches [W9728]. The relation between [F9712] and [W9728] is uncertain, because the floor could not be traced with certainty as reaching the wall; [F9712] may be cut by [W9728]. Also to the W, the relation between the fill of [L9712] and [L9713] is uncertain, but the fills may be identical.

* (but this is not certain)

1992 Note: When excavating [L9813] below [F9712], it was discovered that [F9712] seems to have reached [W9704] rather than [W9626] since bottom of socle [W9626] had been reached

Photo #(4) 71379; #(5) 71380

Additional Observations/Value: [F9712] & [F9661] are at about the same level on either side of [W9626], and have similar relations to it.
