<b>Summary</b>
----------------

**Opened:** To excavate floor makeup of [F9712] from 1991 season, and fill below

**Limits (N)** Bounded by material below [L9787]

**(S)** Bounded by [W9704]

**(E)** Bounded by East bank of AI 32

**(W)** Bounded by [W9728]

**Closed:** Came down on [F9813]; opened [L9834] as floormakeup and fill below

**Matrix:** Floormakeup of [F9712] is thick white crushed kurkar (ca. 2-3 cms.) with flecks of charcoal throughout; fill below is mudbrick debris mixed with yellow-grey ash, material; abundant pottery, few bones, numerous fist-sized stones floating as rubble to west just above floor; down to white kurkar surface with ash and charcoal flecks

**Relations:** [L/F9712] cover and seal [L/F9813]. [L/F9813] cover and seal [L9834].

To the North, [L/F9813] appear to continue into the material below [L9787] and into the North bank.

To the South [L/F9813] appear to reach [W9704]; their relation, however, cannot be determined with certainty until [W9704] is removed. It is possible that [F9813] underlies [W9704]. [F9813] is at approximately the same level as [F9703] to the South of [W9704] and may be identical to it. If [W9704] had been built on top of [F9813], then [F9813] could be part of a series of leveling surfaces made following the destruction below.

To the East, [L/F9813] continues into the East bank of AI 32.

To the West, [L/F9813] appears to reach the sole of [W9728], at about the sixth course of stones. If so, this may contradict the observation in 1991 that [F9712] above [F9813] could not be traced as reaching [W9728], but might be cut by it. Until [W9728] is excavated, their relation is uncertain.

Photos: 86817-86818

**Additional Observations/Value:** Since seals material below, of high value.
