Summary

Opened: Came down on [F9814] ; also reached closing level of [L9733] (1991 season) to South; since material identical, loci were collapsed, also collapsed Eastern edge of L9554; opened [L9824]

Limits (N) Bounded by [W9262]

(S) Bounded by [L9730]

(E) Bounded by [W9728]

(W) Bounded by material below [L9554]

Closed: Came down on Floor ? [F9824]; END of season - not fully excavated

Matrix: The floormake-up of [F9814] consists of thin, white crushed kurlcar surface, with flecks of charcoal throughout; fill - grey-brown mudbrick debris, hard-packed; abundant pottery; special finds include worked bone (needle case?) and iron blade

Relations: [L9814] covers, but does not seal, [L9824] [L9261] covers, but does not seal, the western end of [L9824]. [L9554] covers, but does not seal, the central western edge of [L9824]. [L9733] covers, but does not seal, the South Eastern part of [L9824]. [L9824] covers, but does not seal, the unexcavated material below.

To the North, [L9824] may reach the stone socle of [W9262]. The relation of ? floor [F9824] is uncertain until further excavation.

To the South, [L9824] continues into [L9730], and may be identical to it. The 1991 locus card for [L9730] suggests that there may have been a floor coming up in the Western part of the locus. This may be analogous to the ? floor of [L9824]. Further excavation is needed to determine this. The fills of those two loci, however, are identical.

To the East, [L9824] may reach the socle of [W9728]. More excavation is needed to define the relation of ? [F9824] to [W9728], if any.

To the West, [L9824] continues into the material below [L9554]. More excavation is needed to define the relation of ? [F9824] to the material below [L9554], if any.

Additional Observations/Value: Because not fully excavated, and below a fragmentary floor, of medium value only
