Unit _____	Phase _____	Stage _____	Stratum _____	PoM _____
Summary _____				

Opened: To excavate material below phantom floor [F9559] (1989 season)

- Limits (N)** Bounded by [L9300] and material below.
- (S)** Bounded by [L9558] and material below.
- (E)** Bounded by [L9756]; and by [W9704].
- (W)** Bounded by material below [W9140].

Closed: Brought [L9826] down to level of [L9820] to South; since material identical, collapsed two loci, opened [L9829] as destruction debris locus below

Matrix: Floor makeup of [F9559] badly preserved - only few small patches of white kurkar surface, very thin, atop mudbrick debris; matrix generally softer, lighter in color than that of [L9820] to South; flecks of charcoal throughout; lots of pottery and bones

Relations: [F9559] covers, but does not seal, [L9826] due to the now fragmentary condition of [F9559], [L9826] covers, but does not seal, the Northern end of [L9829].

To the North, [L9826] continues into the material below [L9300] (large paving stones).

To the South, [L9826] continues into [L9820], and may be identical to it.

To the East, [L9826] continues into [L9756]. Both [L9826] and [L9756] come down on destruction debris, but [L9826] comes down to destruction at 13.32 N to 13.31 S, while [L9756] comes down to destruction at 13.47 to 13.39 W. Therefore, it seems the destruction debris slopes downwards from East to West between [L9756] and [L9826]. The relation between [W9704] and [L9826] is uncertain, and will be uncertain until [W9704] is excavated. [L9826] may reach [W9704].

To the West, [L9826] is bounded by an artificial North-South twilight zone to the East of [W9140]. [L9826] continues into the material below this twilight zone.

Additional Observations/Value: Due to possible contamination and since unsealed, of little to medium value
