Summary

Opened: L 9867 came down on a wall. Opened L 9917 and L 9918 to the S and L 9918 to the north of the wall

Limits (N) Bounded on the N by baulk

(S) Bounded on the S by L 9917

(E) Bounded on the E by L 9884

(W) Bounded on the W by material under L 9147

Closed: Came down in the NE part on an other kind of material

Matrix: Redish-brown in the S and more greyish in the N. Not a lot of pottery sherds

Some redish-brown material in L 9918 in the S. Mainly same material as L 9867 above

Relations: L 9867 covers, but does not seal L 9918.

L 9918 covers, but does not seal L 9924 and L 9925

To the W: L 9918 appears to continue into the fill under L 9147

To the S it seems like L 9918 reaches L 9917, but further excavation is needed to determine this relationship.

To the N L 9918 appears to continue into the baulk

To the E L 9918 reaches L 9884, since L 9918 is more or less a continuation of L 9867 that reached L 9864

Note JRZ 93: The actual relation of 9867 to 9918 is unclear. Neither seems to be a pit or rabbit trench, but the material was different, so they are not the same deposit either.

Additional Observations/Value: medium value, fill down to wall
