**Summary**

**Opened:** when horizontal twilight zone L9859 split after coming down on fieldstones of L9938 in NW, mudbrick material of L9940 in NE, and F9859 in S. [L9939] is F9859 and material below.

**Limits (N)** Bounded by L9938 and L9940 to the North.

**(S)** Bounded by W9066 to the South.

**(E)** Bounded by W9914 to the East.

**(W)** Bounded by L9975 to the West.

**Closed:** Not closed, end of season.

**Matrix:** F9859 is of a grey ashy deposit on a thin layer of white plaster. Further matrix description not possible locus was not excavated this season.

**Relations:** [L9939] is covered by [L9859], [L9939] and F9859<sup>Mo?</sup> reach L9938. F9859 appears to extend below W9066, w/ W9066 being built on F9859 (see Card for L9902 for similar floor/wall relationship for W9066). Although F9859 could not be traced to W9914, it is probable that F9859 reached W9914. W9914 probably cuts [L9939], but this relationship requires further excavation to be determined. Further excavation is also required to determine if [L9939] reaches or is cut by L9940 (which may also be a continuation of the unknown sub-floor matrix of [L9859]), and L9975. The far eastern portion of L9939 is also covered by L9902.

Note that F9859 probably = F9902 E of W9914.

EB-S '03. = AJ33.L9922

**Additional Observations/Value:** IRON I (?) fill below Phase 7 floor. High Value (Unexcavated '93 season.)
