**Summary**

**Opened:** L9927 came down on F9927. L9955 opened below F9927

**Limits (N)** L9928

**(S)** L9844

**(E)** W9684

**(W)** W9275

**Closed:** Came down on W9960 and W9961 and also F9955

**Matrix:** Floor makeup of F9927 was a thin layer of light grey ash with a resurfacing at 13.18. Fill was medium brown moist loam with many fragments of ash and charcoal (from tiny to thumb-size). There were a few particles of small brick debris. Matrix similar to L9844 to the S. and L9927 above (though with much more charcoal).

**Relations:** L9927 covers but does not seal L9955. L9926 also covers but does not seal L9955 below. L9955 covers the wall/pedestal W9960 and also wall W9961. To the S. L9955 reaches phase D of W9262 (the lower stone socle), as does F9959. To the E L9955 reaches the W face of W9684 and F9955 reaches the second or possibly third (from the top) phase of W9684. See W9684 1993 card for discussion. To the N. L9955 appears to reach the S. tip of F9928. F9955 rises slightly to reach the S. face of W9961 below the tip of F9928. F9955 does not reach F9928. To the W. L9955 reaches in its N. half a massive boulder associated either with an earlier phase to W9275 or an upper phase to the wall/pedestal W9960. To the S. of this L9955 continues into the fill below W9275. F9955 also continues into the fill below W9275. The stone wall/pedestal W9960 may form a possible doorway along with phase D. of W9262. F9955 does not reach W9960. However since F9955 reaches W9961 which dovetails with W9960, F9955 presumably reached W9960. F9955 covers and seals L9971 below.

**Additional Observations/Value:** Entire floor which seals L9971 and reaches walls 9684, 9262, 9275 and 9961; high value.
